

Version history - PDTN

You find the software version history for the released PDTN software below.

Version 1.1-0-00

May 27th, 2026

New bootloader supporting update of FUS (Firmware Upgrade Services) and Bluetooth® Low Energy.

- Possibility to update Bluetooth® communication.

Added possibility to handle custom text more freely.

Improved flexibility on what to show on the built-in display.

Improved output settings concerning 4 - 20 mA.

BACnet max. cov = 50 to avoid invalid settings.

Zero calibration from factory is not active in version 1.0 (causing high need for zero calibration on 1.0. In 1.1 this is fixed.).

Fixed a bug when using 2 rows on display for one sensor product variant.
